

Sage Forecasting Sage WinForecast Professional

Sage Forecasting is bundled with some of the Line 50 Accounts packages and has relatively basic forecasting and cash flow functions. Useful none the less Sage WinForecast Professional is a stand-alone, multi use package you can utilize without having to be attached to a single source of accounts information. Create your own Forecasting and Cash Flows as well as Profit and Loss and Balance Sheets.

It is an extremely powerful package and a very useful management tool.

It is wonderfully flexible for:

- Creating all the sections you need to achieve your preferred view of the analysed information.
- Flexing by % or money the values you want to view.
- Adding calculated fields to your forecasts.
- Changing the number of years in a forecast.
- Linking your data to actual Sage accounts information in Line 50 and 100.
- Linking your data to actual spreadsheet calculations.
- Refreshing the information in your forecasts as often as the data changes.
- Tracking assets and letting the programme calculate their depreciation.
- Setting up loans and letting the programme calculate the interest.

If you change your mind about a layout, simply alter it to your new plan. It is extremely flexible.

Use subheadings and subtotals - e.g. You may only want the forecast to report all motor vehicles on one line, but you need to enter them individually to allow for changes. No problem, it is quite easily done in the setting up.

Customise reports, build in seasonal variations, set up factoring, use multi-currency information, and modify simple or composite stock records and usage as well as much more. Consolidate different companies to arrive at a corporate set of reports.

Sage WinForecast Professional is an extremely useful management tool. It is hugely customisable, amendable and updateable. Ask for a demonstration.
